

## **System requirements**

- PC with Pentium 133 MHz or higher
- Windows 95, 98, 2000, NT4.0, or XP or higher
- 32 MB RAM minimum; 48 MB RAM or higher recommended
- CD-ROM drive or internet access to download
- At least 16 MB disk space
- Mouse or compatible pointing device

## **Screen resolution requirement**

Your computer must have its screen resolution set no coarser than 1024x768. For most modern computers this isn't a problem, but occasionally an older machine is setup with something like 800x600 resolution. This is a problem for OptiTruck, since the input screens contain a lot of information and they simply will not fit on an 800x600 screen. OptiTruck will stop the program if it senses resolution less than the minimum required 1024x768 resolution, and will refer you to the manual for instructions on how to fix it.
